

Healthcare & Medical Flooring

Healthcare facilities can have a wide diversity of flooring needs. In a hospital or large medical facility, an Emergency Room will have different needs than the cafeteria, which will have different needs than the lobby. Durability and aesthetic appeal are essential regardless of the room, but optimal structural design is the essential variable where floors can become truly functional.

Industry Knowledge:

Allegheny Installations has been serving your region for decades. We know how to design and install a floor for a healthcare facility by providing top-notch customer service and installing all the best materials with the best team.

Among the common issues for healthcare facilities:

- Durability – If your floor cracks, wears out, or deteriorates, it can become a major impediment.
- Aesthetics – You will want floors to look great in a hall for children's healthcare and for senior care.
- Chemical Resistance – Hospitals have intense sanitization regimens, and your floor needs to withstand harsh cleaning chemicals.
- Low-Maintenance – You have entire hospitals and healthcare facilities, you don't have time to waste on floors that are difficult to clean.

What You Can Expect from Allegheny Installations:

When you hire Allegheny Installations, you are hiring decades of flooring expertise and customer service, specifically in epoxy, terrazzo and polished concrete floors. We have a wealth of customization options at our disposal – when we say that our floors are custom designed, we mean it. Your floor will be a one-of-a-kind, produced for both your functional and aesthetic needs.
